

We have three additional features in our project.

- 1) Feature 1 allows anyone to register in PriCoSha system.
- 2) Feature two allows logged in user to make a comment in any public post or any post which the user is able to see through membership.
- 3) Last feature is **UNFRIEND**, this allows user to remove a member from any particular group. Please note that when user is removed, any tags or comment the “removed” user made is still visible to current member of the group. However, “removed” user can no longer see any private post of the group.
